REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach and/or suggest a bipolar, zero-gap type electrolytic cell having an anode in an anode chamber wherein the anode base has an open area percentage of 25 to 75% after being applied with a catalyst, having a maximum height difference of 5 to 50 μm between irregularities on a surface thereof and a thickness of 0.7 to 2.0 mm and a cathode in a cathode chamber arranged back to back with the anode chamber, wherein the cathode has at least two layers stacked in the chamber and the layers include a conductive cushion mat and a hydrogen generating cathode which layer is adjacent to the cushion mat layer and arranged in an area for contact with the anodic ion exchange membrane.

The prior art of record shows that the cushion mat and hydrogen cathode layers forming the cathode in the cathode chamber is known and that the anode materials are known, but the prior art of record does not teach that the combination of components of the anode where the open area percentage is 25 to 75% and the maximum height difference of 5 to 50 μm between irregularities on a surface thereof and a thickness of 0.7 to 2.0 mm is pertinent to the voltage change and the average current efficiency of the cell as shown by way of applicants specification in Tables 1-4 where the instant invention and comparative examples are shown.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
